Hakkımda

Hello, my name is Muhammed Hoşgör. I have been actively involved in the software industry in various fields since 2014. In 2021, I graduated from Necmettin Erbakan University with a degree in Management Information Systems, achieving a GPA of 3.33. I have over 3 years of experience in Flutter and Dart.

Currently, I am serving as a Flutter Team Leader in the company I work for. I am dedicated to improving both myself and my team in Layered Architecture and Clean Code practices. Meanwhile, I contribute to the development of projects from various sectors.

Teklif Group | Flutter Team Leader | (June 2022 - Ongoing)

Teklif Group is a software company that provides support to sectors such as education, insurance, automotive, and logistics. At Teklif Group, I played an active role in leading teams and developing projects.

• Otogoo (Accident Reporting Application)

I developed the mobile application for the Otogoo project, which provides emergency roadside assistance and insurance services for vehicles, using Flutter with GetX state management in accordance with Clean Code Architecture principles. As part of the project, I also designed a Flutter Web Panel for car rental companies, utilizing the MVVM Design Pattern and Provider for state management

• Jetlogi (Cargo Delivery Uygulaması)

I developed the mobile application for a cargo project that provides distribution and logistics services in regions with high export and import activity across Turkey, using Flutter with GetX state management and adhering to Clean Code Architecture principles.

• Dersigo (Education Uygulaması)

It is an interface application where students can follow online educational content and solve questions. In this project, I chose to use the Bloc Design Pattern and Bloc for state management.

• Sıfıraraçal (Automobile Vehicle App)

sifiraracal.com is a mobile e-commerce application where brand new cars can be purchased and which already has many customers. For this application, I chose the Bloc Design Pattern and Bloc (Cubit) for state management. The application is currently under development and will be released soon.

Tepe Bilişim | Support and Software Staff (February 2021 - June 2022)

I provided software support, development within the application, and invoice design for customers of the Dia ERP software, along with business process analyses and reporting. Additionally, I actively participated in graphic design, website creation, and maintenance processes for clients within the company and for Tepe Bilişim.

Some of the projects I worked on include:

- Tepe Bilişim Website, FیزیNET Website
- XLTS Invoice Design, Promotional Videos
- Brochure Designs

Freelance Software and Graphic Design

I specialize in producing works in mobile, web, and graphic design fields. Some of my projects include Tabu King mobile application, uzunlargoldgarden website, muhammedhosgor website, hsyıldırım logo design, Aktüel Marketler mobile application, as well as various tasks such as video and application promotion visuals for the Tabu King application across different domains.

Skills / Experience

- Responsive UI
- Clean Architecture, MVVM, MVC, Bloc Architecture,
- GetX, Bloc (Cubit), Provider
- Object Oriented Programming
- Problem Solving
- Test: Unit , Widget, TDD Test
- Git usage,
- Restful Api, Soap Api
- PostgreSQL, MSSQL
- Firebase, MongoDB
- Shred Preference, SQLite
- Manage application publishing and review processes
- Map and Location operations (two locations instantaneous real distance calculation, other map operations)
- Flutter Web
- .Net Core
- ERP
- Dia
- Adobe Photoshop
- Adobe Illustrator
- Canva
- Camtasia Studio
- 3D Max
